How To... Light an A-Series Grill

- 1. We recommend applying vegetable oil to each cooking grate prior to lighting.
- 2. Ensure all control valves are in the OFF position (parallel to the work shelf).

- 3. Securely connect the regulator to the propane cylinder and test for leaks according to the Owner's Manual.
 - QCC Connection: The bright green QCC connector on a regulator threads snuggly and easily onto the external threads of the propane cylinder valve by turning the QCC clockwise.
 - POL Connection: The POL connector on a regulator is inserted into the propane cylinder valve and screws in by turning counter clockwise using the black plastic hand wheel.
- 4. Open cylinder valve completely and allow system to pressurize takes about 1 minute.
- 5. Hold a lit long handled butane lighter gun or fireplace match next to a burner down through the cooking grate and turn the control knob to the ON position. The burner will ignite instantly with a *POOF* sound.
- 6. Remove lighter and open 2nd control valve the 2nd burner will light instantly from the 1st.
- 7. Repeat Steps 4 & 5 for each section of the grill you wish to use.

ALL EQUIPMENT IS FOR OUTDOOR USE ONLY.
